

GRAFILIT® MultiForce NG is an expanded graphite (nuclear grade) based material with multiple stainless steel foil inserts, thus facilitating its handling, cutting and enhances the surface load. GRAFILIT® MultiForce NG has excellent chemical and thermal resistance. Its high creep resistance and high compressibility make it suitable for highly demanding conditions in nuclear power stations and in the chemical and petrochemical industries. The combination of an anti-oxidation inhibitor with a very low percentage of sulphur content makes this material the perfect solution for most gasket applications in Nuclear Power Stations.
